Y-320_2	P1_16	134n

Y-320_3	P1_17	134c
Y-320_4	P1_18	135n

The labeling efficiency was determined to be: 99 %

Peptide and Protein Summary

- All spectra were searched against a protein sequence database, Mouse Uniprot (2021), with forward / reverse sequences and common contaminants. Resulting peptide assignments were filtered utilizing the target-decoy approach via a linear discriminant analysis that weights several features
- Peptides and proteins were filtered to a 1% false discovery rate (FDR)
- Peptides were assembled into collapsed protein groups via the rules of parsimony
- Peptides were further filtered for quantitative robustness by requiring a minimum of 360 signal / noise (SN).
